**Author**      **Topic: Global page tables**

**adhanas**      Mon Mar 24 18:44      

---

It's given that the global page tables should be shared by all the processes in the system. Now, should these be placed in the kernel heap or as any other regular page table?

If they are placed on the free frames, am I correct in presuming that they should be memory resident, always?

**hcnguye3**      Mon Mar 24 23:58

on free frames (check out the slides for the frame numbers you should use to put them), and yes they should be resident in the memory
